

Appendix 5

NMAC Guidelines for Managing All-Risk Incident Requirements

NMAC will support all-risk incidents. The primary mission for the agency fire programs is wildland fire management. It is recognized that situations and events may influence this principle, and in a given situation, an all-risk incident may be given priority.

Generally, requests under the Initial National Response Plan, parent document of the Federal Response Plan (FRP), are given priority over Departmental or agency requests. In all cases responses will be measured against program impacts to the wildland fire agencies. Alternative solutions to meeting the requested capability will be identified as appropriate.

Wildland fire agencies have tremendous capability that can make significant contributions to emergency management requirements regardless of source. The agency fire programs are responsive, proficient and disciplined. NMAC will promote actions to facilitate development of ICS and emergency management skills in cooperating agencies, with the goal for them to develop self-sufficiency and response capability.

NMAC will use the following planning thresholds determine appropriate response to resources requests originating from all-risk incidents.

<u>Prep. Level</u>	<u>Action</u>
1 – 2	Request will be evaluated considering the gravity of the all-risk incident, current and future conditions and situations. Incident Management Teams, labor (firefighting personnel), contracted resources/services (ground/aviation) response very likely. Impacts to scheduled training, prescribed fire and other priority projects evaluated. Manage response to avoid cancellation/re-scheduling.
3	Request will be evaluated considering the gravity of the all-risk incident, current and future conditions and situations. Incident Management Teams, labor (firefighting personnel), contracted resources/services (ground/aviation) response likely. Initial attack resources are drawn only from areas of low-moderate risk. Support services and contracted personnel/equipment available unless supporting active wildland fire incidents or being held in paid standby as a contingency resource. Impacts to scheduled training, prescribed fire and other priority projects evaluated. Manage response to avoid cancellation/re-scheduling.
4 – 5	Request will be evaluated considering the gravity of the all-risk incident, current and future conditions and situations. Incident Management Teams, labor (firefighting personnel), contracted resources/services (ground/aviation) response not likely. Aside from current commitments, NMAC will maintain 2 Type 1 Incident Management Teams and 5 Type 2 Incident Management Teams for potential wildland fire assignments.

Initial attack resources are drawn only from areas of low-moderate risk. Support services and contracted personnel/equipment available unless supporting active wildland fire incidents or being held in paid standby as a contingency resource. Impacts to prescribed fire evaluated. Manage response to avoid cancellation/re-scheduling.
